COPYRIGHT: (C)1991,JPO&Japio

(57) Abstract:

PURPOSE: To easily designate the processing where the contents of a dynamic area are initialized to the necessary value in an execution state by setting the prescribed initial value designated in the execution state to the entire dynamic area when the prescribed executing time is designated and then starting the execution of a load module.

CONSTITUTION: In an initialization processing step 10, a dynamic area is acquired based on the control information on a load module. If it is decided in a processing step 11 that no prescribed executing time is designated, the dynamic area is kept in the contents obtained the area is acquired. When a prescribed executing time is designated, the prescribed initial value that is decided with designation of the executing time in a processing step 12 is set to the entire dynamic area. Then the execution of the load module is started.
